

SIVA SURYA

Chennai, India | +91 8072079799 | sivasurya06082001@gmail.com | linkedin.com/in/sivasurya-ai/

SUMMARY

Full Stack AI Developer with hands-on experience across AI/ML product development, cross-stack system analysis, and full-stack engineering. Skilled in Python, SQL, FastAPI, Flask, NLP, Generative AI, and OpenAI APIs, with practical exposure to AI recruitment systems, multilingual AI and document processing (PDF/DOCX generation, translation, transcription, text-to-speech), API validation and regression testing, and data wrangling, statistical analysis, and visualization (Pandas, PySpark, Power BI, Tableau). Experienced building end-to-end systems — from data pipelines and model integration through databases and responsive front-end interfaces — with a strong foundation for AI Engineer, Generative AI Engineer, Full Stack AI Engineer, Data Analyst, Data Scientist, and Full Stack Developer roles.

TECHNICAL SKILLS

Programming Languages: Python, SQL

AI / Machine Learning: Machine Learning, Deep Learning, Scikit-learn, TensorFlow, OpenCV

Generative AI / LLM: Generative AI, Large Language Models (LLMs), Prompt Engineering, OpenAI API, Embedding Models, Resume Intelligence Systems, AI Assessment Systems

NLP: Natural Language Processing (NLP), NLTK, spaCy

Data Analysis: Data Wrangling, Exploratory Data Analysis (EDA), Statistical Analysis, ETL Pipelines, PySpark, Web Scraping, Pandas, NumPy

Data Visualization: Power BI, Tableau, Matplotlib

Backend / APIs: FastAPI, Flask, API Validation

Frontend: React.js, Responsive/Role-Based Dashboards

Databases: MySQL, Database/Schema Analysis

Document Processing: PDF Generation, DOCX Processing, Dynamic Document Templates, Multilingual Localization, Translation, Transcription, Text-to-Speech

Engineering Practices: Regression Testing, Bug Verification, Debugging, Caching, Backend Optimization, Unit Testing

Tools & Version Control: Git, GitHub, PyMuPDF

EXPERIENCE

Full Stack AI Developer — Skandax Nexus

Chennai, TN | Sep 2025 – Sep 2026

- Developed AI-powered recruitment features for SkandaxHIRE, including resume parsing, ATS scoring, semantic resume-to-job matching, skill extraction, candidate ranking, an MCQ Interview Generator, emotion-aware technical interviews, KYC verification, and cover-letter generation, using Python, FastAPI, and Flask.
- Investigated and worked within an existing SkandaxONBO codebase and database schema, analyzing existing functionality, APIs, and data structures to support reliable feature development and validation on a previously built system.
- Contributed to SkandaxONBO's HR Documents functionality — dynamic document templates, template-loading workflows, and frontend-to-API data flow — and investigated a user-facing "failed to load template" issue by validating the templates API and checking editor-vs-generated-document consistency.
- Performed regression validation and bug verification across SkandaxONBO's template, document-generation, and admin-facing workflows, debugging integration boundaries between frontend UI, backend APIs, and the database layer.
- Built multilingual AI capabilities for the Multilingual AI Hub, including translation, speech transcription, text-to-speech, and PDF/DOCX generation, addressing formatting preservation and Tamil-language rendering/alignment to maintain document output fidelity.
- Integrated OpenAI APIs across recruitment and multilingual workflows for interview automation, resume analysis, candidate assessment, content generation, and translation; improved AI response latency and reliability through prompt engineering and caching strategies.
- Contributed React.js front-end development for LETA X, building responsive, role-based dashboards and reusable UI components that integrate AI-generated recommendations and content.
- Broadened cross-product AI engineering exposure through GPIA V2/V3 (AI-related backend/frontend utility modules) and Orbita (voice-related functionality and product/UI discussions), while working across APIs, databases, testing, and deployment in a fast-iteration product team.

AI/ML Intern — Icanio Technologies

Tirunelveli, TN | Dec 2024 – May 2025

- Built CareerBuddy AI, an ML/NLP-based career recommendation engine, using TF-IDF, regex-based parsing, and automated resume parsing.

- Developed an end-to-end job-title prediction pipeline, improving prediction accuracy by 15%.
- Designed a chatbot-enabled UI with Flet, delivering conversational career guidance to end users.
- Automated job-scraping workflows across multiple job boards, cutting data-collection time by 30%.

PROJECTS

SkandaxHire — AI Recruitment & Talent Assessment Platform	<i>Apr 2026 – Sep 2026</i>
● Built a full-stack AI recruitment platform including ATS Checker, Resume Analysis API, Resume Builder, MCQ Interview Generator, Emotion-Aware Technical Interviews, Cover Letter Generator, Voice Analysis, and KYC Verification. ● Implemented semantic resume-to-job matching, automated skill extraction, and candidate ranking to support intelligent screening at scale. ● Integrated OpenAI APIs and NLP pipelines with multilingual support, enabling real-time candidate evaluation, and optimized backend response latency through prompt engineering and caching.	
SkandaxONBO — HR Onboarding & Document Management Platform	<i>Nov 2025 – May 2026</i>
● Investigated an existing onboarding platform's codebase and database schema to support reliable feature development across HR Documents, admin, and template functionality. ● Built and validated dynamic document templates and PDF generation workflows, working to keep the in-app editor consistent with generated documents. ● Diagnosed a user-facing document-template loading issue through templates-API testing and regression validation of the document workflow.	
LETA X — AI-Powered Tourism Platform	<i>Sep 2025 – Oct 2025</i>
● Built responsive, role-based front-end dashboards in React.js for an AI-driven tourism and travel-planning platform. ● Collaborated on integrating AI-generated recommendations and content into user-facing interfaces. ● Translated design requirements into reusable UI components, improving front-end consistency across dashboard views.	
CareerBuddy AI	<i>Dec 2024 – Apr 2025</i>
● Built an AI-powered career recommendation platform combining ML, NLP, TF-IDF, and automated web scraping. ● Performed data collection, cleaning, and feature engineering on scraped job postings to feed a job-title prediction pipeline, improving prediction accuracy by 15%. ● Automated job-scraping workflows across multiple job boards, cutting manual data-collection time by 30%. ● Designed an integrated chatbot UI using Flet for seamless, conversational career guidance.	
COVID-19 Analysis	<i>Jun 2024 – Aug 2024</i>
● Performed exploratory data analysis on public health datasets covering cases, deaths, recoveries, and regional trends. ● Designed interactive Tableau dashboards with KPIs, drill-down charts, and trend visualizations to communicate pandemic progression to non-technical audiences.	

EDUCATION

Master of Computer Applications (MCA)	<i>Aug 2023 – May 2025</i>
Kalasalingam Academy of Research and Education, Virudhunagar, TN	CGPA: 7.9
Bachelor of Computer Science	<i>Jul 2019 – Jun 2022</i>
Thiagarajar Arts and Science College, Madurai, TN	CGPA: 8.8

CERTIFICATIONS

- NPTEL — Python for Data Science
- Novitech — Full Stack Developer Course
- Data Science with Machine & Deep Learning
